Literature Review, Evaluation & Grading

Project: Egypt Tourism Intelligence — Are More Tourists Creating More Value?

LITERATURE REVIEW

The project uses published tourism statistics to examine visitor arrivals, tourism revenue, travel markets, hotel activity, and seasonal patterns in Egypt. Main sources include the Central Bank of Egypt, UN Tourism, and CAPMAS. These sources support trend and market analysis, although the availability and detail of data may differ by year and indicator. Each dataset will be checked for coverage, definitions, and reliability before analysis.

1. FEEDBACK & EVALUATION

The lecturer will evaluate the project's relevance, data quality, analytical methods, dashboard clarity, and usefulness of its recommendations. Feedback will be collected during project reviews and used to correct errors, improve visuals, and strengthen conclusions. Final evaluation should be based on the completed work and the evidence presented.

2. SUGGESTED IMPROVEMENTS

Possible improvements include adding more recent and detailed tourism data, improving data cleaning and documentation, comparing arrivals with revenue, and including destination-level or hotel indicators where reliable data are available. Forecasts and scenario analysis may be added if the dataset supports them. Estimated values must be clearly labelled and kept separate from official statistics.

3. FINAL GRADING CRITERIA

The following is a proposed grading breakdown and can be adjusted to match the lecturer's rubric.

Assessment Area	Weight
Documentation and literature review	20%
Data preparation and analysis	25%
Dashboard implementation and usability	25%
Testing, validation, and accuracy	15%
Presentation and responses to questions	15%

Total: 100%. Marks should reflect accuracy, clarity, evidence-based conclusions, and completion of the stated project objectives.
