REQUIREMENTS GATHERING

Egypt Tourism Intelligence

Are More Tourists Actually Creating More Value?

1. STAKEHOLDER ANALYSIS

The project analyzes tourist arrivals, revenue, source markets, destinations, and seasonal trends in Egypt.

- **Tourism authorities:** Monitor performance and identify development opportunities.
- **Hotels and travel agencies:** Understand demand, seasonality, and target markets.
- **Marketing teams:** Compare source markets and improve campaign planning.
- **Investors:** Identify potential tourism investment opportunities.
- **Analysts and evaluators:** Check data quality, methods, and findings.

2. USER STORIES & USE CASES

Tourism performance: Users track arrivals, revenue, tourist nights, and yearly growth.

Source markets: Marketing teams compare countries and regions to identify promising markets.

Destinations and seasons: Planners compare destinations and monthly demand to identify seasonal patterns.

Revenue opportunities: Decision-makers compare visitor growth with revenue growth.

Data exploration: Analysts filter the dashboard and use verified indicators to support recommendations.

3. FUNCTIONAL REQUIREMENTS

- Collect tourism data from documented sources such as CBE, UN Tourism, and CAPMAS.
- Clean data by handling missing values, duplicates, and inconsistent formats.
- Combine compatible datasets and organize them into fact and dimension tables.
- Show tourist arrivals, tourism revenue, growth, and tourist nights where data is available.
- Compare source markets, destinations, and seasonal trends.
- Provide interactive filters for dates, countries, regions, and destinations.
- Present results through KPI cards, charts, maps, and trend comparisons.
- Add forecasting or scenario analysis only when the data supports it.
- Provide recommendations based on the analysis.
- Organized dashboard into : Tourism Overview; Who Visits Egypt?; Where & When?; Opportunities & Strategy.

4. NON-FUNCTIONAL REQUIREMENTS

Performance: Filters and pages should respond within an acceptable time.

Accuracy: Calculations must be checked against source data.

Reliability: Data preparation and refreshes should produce consistent results.

Usability: The dashboard must be clear, readable, and easy to navigate.

Security: Protect data files and database credentials.

Maintainability: Document queries, measures, and data transformations.

Compatibility: Use Power BI and SQL Server, with Python if needed.

Transparency: Document sources and distinguish official data from estimates and forecasts.

EXPECTED OUTCOME

The project will deliver a Power BI dashboard that analyzes Egypt's tourism performance and highlights potential growth opportunities. Findings and recommendations will be based on available, documented data.
